Łódź, Poland

Education & Certificates

Łódź University of Technology | 2024 – 2028 (incoming 5th semester)

Computer Science (IFE) | Medium of Instruction – **English**

Duolingo English Test (DET): **135 — C1 (CEFR)**

2023 IELTS: Band 6.5

Technical Skills

Java, Python, Git, Linux (Ubuntu), Confluence, Unit Testing

Agile Framework, APIs, REST, Spring Boot

Projects

Source Retrieval RAG Pipeline with Fraud Detection | [Source code](#) | [Demo Video](#) | [Documentation](#)

- Built an ingestion layer for (PDF, DOCX, TXT) files stripping them of boilerplate to extract contents of the file using LangChain Text Splitter and Regex.
- Installed a local AI model (Ollama, Llama 3.2) to optimize the retrieved chunk of text and adjusted it to read and detect fraud signs (duplicate invoices, corrupted bank details, etc.) inside files with 0-100 scores on the frontend side.
- Wired Frontend and Backend using FastAPI. Added hybrid retrieval layer to enable user to find the right text.

Universal University App | [Source code](#)

- Built a REST API and relational data layer for academic records (users, subjects, enrollments, grades) using Spring Boot, Spring Data JPA, and PostgreSQL, replacing manual spreadsheet tracking with one queryable system
- Implemented JWT-based authentication and role-based access control (Spring Security, BCrypt) across the REST endpoints to separate teacher and student permissions (grade entry, subject creation, enrollment), preventing unauthorized edits to sensitive academic data.
- Containerized PostgreSQL with Docker Compose for a one-command local environment, wired the Angular frontend to the REST API using route guards, giving teachers and students a portal to enroll, assign grades, and track progress without admin intervention.

SQL Database Engine in Java | [Source code](#)

- Wrote a tokenizer, parser, and command-pattern executor to support CREATE, SELECT, UPDATE, and DELETE against JSON-file-backed tables via Jackson
- Used Jackson's ObjectMapper to serialize and deserialize each table to/from JSON on every read/write.

Spoken Languages

- Polish – A2, Spoken
- English – C1
- Ukrainian – native
